Preface

Net.ObjectDays (NODe) has established itself as one of the most significant events on Objects, Components, Architectures, Services and Applications for a Networked World in Europe and in the world. As in previous years, it took place in the Messekongresszentrum (Fair and Convention Center) in Erfurt, Thuringia, Germany, this time during 7–10 October 2002. Founded only three years ago as the official successor conference to JavaDays, STJA (Smalltalk and Java in Industry and Education) and JIT (Java Information Days), NODe has grown into a major international conference that attracts participants from industry, research and users in equal measure since it puts strong emphasis on the active exchange of concepts and technologies between these three communities.

Over the past few years, the NODe conference has developed a remarkable track record: a new paradigm (Generative Programming) was born at NODe (citation James Coplien), nearly all of the most prominent researchers and contributors in the object-oriented field (and beyond) have given keynotes at NODe, new topics have been integrated (like Agent Technology and Web-Services) and, now, for the first time, postconference proceedings are being published by Springer-Verlag. Altogether three volumes will be available. This volume is compiled from the best papers of the main conference. Two additional volumes will be published, one containing the best contributions of the workshops relating to the Web, Databases and Web-Services and another one with the best contributions to the agent-related workshops and the MALCEB symposium (Symposium on Multi-agent Systems, Large Complex Systems, and E-Businesses) that were cohosted with NODe 2002: R. Kowalczyk, J. Müller, H. Tianfield, R. Unland (editors) Agent Technologies, Infrastructures, Tools, and Applications for E-Services (LNAI 2592) and A. Chaudhri, M. Jeckle, E. Rahm, R. Unland (editors) Web, Web-Services, and Database Systems (LNCS 2593).

This volume contains abstracts of the keynote speeches as well as 26 peer-reviewed, original papers that were chosen from the paper accepted for the main conference. This means that the papers in this volume are a subset of the papers presented at the main conference track, which in turn were selected by the programme committee out of the submitted papers based on their scientific quality, the novelty of the ideas, the quality of the writing, and the practical relevance. This double selection process not only guaranteed the high quality of the papers but also allowed the authors to consider comments and suggestions they had received during the conference and to integrate them in their final version. Furthermore, authors were allowed to extend their paper to a fully fledged version. We hope that the results will convince you as much as they did us and that these proceedings give you many new inspirations and insights.

The contents of this volume can best be described by an excerpt from the original Call for Papers for NODe 2002. Ever evolving and increasingly powerful information and communication technologies have substantially changed the nature of global relation-
ships, the sources of competitive advantage, and the opportunities for economic and social development. The Internet, portable computers/devices and wireless communication technologies have turned the globe into an interconnected network of individuals, firms, organizations and governments communicating and interacting with each other through a variety of channels.

NODe 2002 especially focuses on topics such as object-oriented (distributed) technologies, concepts and systems, agent-related technologies and concepts, advanced database systems and the Web, and E-commerce, including both the engineering and the use of Web-based application systems. Since Java and Smalltalk play a key role in the above-mentioned areas, we considered them to be of particular interest for the conference. As systems ought to be engineered well to be able to cope with the influx of the above-mentioned technologies in a positive way, the integrative factor of software architectures and component-driven technologies, especially their demands with regards to structures (patterns and architectures) and processes (enhanced life-cycles and workflows), form additional focuses of NODe 2002. However, as in the years before, NODe 2002 was open to questions and aspects of object-oriented and Internet-based technology in general and invited submissions related to a wide variety of topics in these areas.

As editors of this volume, we would like to thank once again all programme committee members, as well as all external referees for their excellent work in evaluating the submitted papers. Moreover, we would like to thank Mr. Hofmann from Springer-Verlag for his cooperation and help in putting this volume together.

December 2002

Mehmet Aksit
Mira Mezini
Rainer Unland
3rd International Conference Net.ObjectDays (NODe)  
2002  
*Objects, Components, Architectures, Services, and Applications for a Networked World*

**Programme Committee Co-chairs**

Mehmet Aksit  
University of Twente

Mira Mezini  
Technical University of Darmstadt

**General Chair NODe**

Rainer Unland  
University of Essen

**Members of the Programme Committee**

Ken Barker  
University of Calgary

Lodewijk Bergmans  
University of Twente

Judy Bishop  
University of Pretoria

Jean-Marc DeBaud  
Ivorium Software SA

Alejandro Buchmann  
Technical University of Darmstadt

Lothar Borrmann  
Siemens AG

Akmal Chaudhri  
IBM

Krzysztof Czarnecki  
DaimlerChrysler AG

Bernd Freisleben  
University of Marburg

Kurt Geihs  
University of Frankfurt

Joseph Gil  
Technion, Israel

Rachid Guerraroui  
EPFL Lausanne

Lutz Heuser  
SAP

Heinrich Hußmann  
Technical University of Dresden

Mario Jeckle  
DaimlerChrysler AG

Nick Jennings  
Southampton University

Stefan Kirn  
Technical University of Ilmenau

Ryszard Kowalczyk  
CSIRO Melbourne

## Table of Contents

Java Class Deployment Using Class Collections .............................. 135
  *Stefan Paal, Reiner Kammüller, Bernd Freisleben*

Do We Need Components for Persistent Data Storage in the Java 2 Enterprise Environment? ................................. 152
  *Stefan Böttcher, Robert Hoeppe*

### Web Services

Consistency Checking of Financial Derivatives Transactions ............... 166
  *Daniel Dui, Wolfgang Emmerich, Christian Nentwich, Bryan Thal*

Toolkits for Generating Wrappers ............................................. 184
  *Stefan Kuhlins, Ross Tredwell*

Developing a Generic Concept of an Electronic Negotiation Process with ebXML .............................................................. 199
  *Philipp Thun, Michael Rebstock*

### Aspect Oriented Software Design

AspectS – Aspect-Oriented Programming with Squeak ....................... 216
  *Robert Hirschfeld*

Relational Database Support for Aspect-Oriented Programming .......... 233
  *Awais Rashid, Neil Loughran*

Object Teams: Improving Modularity for Crosscutting Collaborations ... 248
  *Stephan Herrmann*

### Agents and Mobility

Ubiquitous Healthcare: The OnkoNet Mobile Agents Architecture ...... 265
  *Stefan Kirn*

Extending Activity Diagrams to Model Mobile Systems .................... 278
  *Hubert Baumeister, Nora Koch, Piotr Kosciuczenko, Martin Wirsing*

### Product Lines

A Concrete Method for Developing and Applying Product Line Architectures .................................................. 294
  *Michalis Anastasopoulos, Colin Atkinson, Dirk Muthig*

Generic Implementation of Product Line Components ..................... 313
  *Dirk Muthig, Thomas Patzke*
Synchronization

Qualifying Types Illustrated by Synchronisation Examples .............. 330
   J. Leslie Keedy, Gisela Menger, Christian Heinlein, Frans Henskens

Advanced Thread Synchronization in Java Using Interaction Expressions .................................................. 345
   Christian Heinlein

Testing, Refactoring, CASE Tools

Refactoring Browser for UML ........................................ 366
   Marko Boger, Thorsten Sturm, Per Fragemann

Test-Driven Web Application Development in Java ................. 378
   Jens Uwe Pipka

UML-Based Statistical Test Case Generation ......................... 394
   Matthias Riebisch, Ilka Philippow, Marco Götze

Do We Need ‘Agile’ Software Development Tools? ................. 412
   Udo Kelter, Marc Monecke, Markus Schild

Author Index ....................................................... 431
